- SQL

RDBMS

- MySQL
- PostgreSQL
- SQLite

Virtualization Tools

- Docker
- Docker Compose

Operating Systems

- Microsoft Windows
- Ubuntu/Linux

Versions Control

- Git
- GitHub
- GitLab
- BitBucket

Frameworks/Libraries

- Laravel
- VueJS
- Livewire
- Bootstrap
- Tailwind
- Carbon
- RestAPI

WP Plugins

- Meta Box, ACF
- Elementor, WPBackery, Gutenberg, Divi
- Contact Form 7, Gravity Forms
- WooCommerce, eCommerce
- Polylang, WPML
- LearnPress

Application/Web Servers

- Apache
- OpenServer

Development Tools

- Visual Studio
- PhpStorm

Testing Tools

- PHPUnit
- PHPStan
- Jenkins

Experience

SEO-Optimized Microsite System on WordPress (Template-Based)

Project Description: Scalable WordPress-based template system for an international AdTech company specializing in lead generation. The solution enables the client to deliver fast, SEO-optimized microsites with custom branding and responsive design by reusing pre-built templates categorized by niche and style. This approach significantly reduced delivery time and improved consistency across projects.

Domain:	AdTech / Web Development
Involvement Duration:	0.5 years
Project Role:	Full Stack WordPress Developer
Responsibilities:	- Developed and customized WordPress themes and plugins; - Designed dynamic template structures for flexible content handling; - Implemented SEO-friendly architecture and optimized performance; - Integrated interactive components with JavaScript and Swiper; - Ensured responsive and accessible frontend design; - Collaborated with the client to refine templates for multiple industries; - Tested, debugged, and optimized reusable modules for scalability.
Project Team Size:	10-12 team members
Tools & Technologies:	PHP, WordPress, JavaScript, Swiper, HTML, CSS, MySQL, Git.

ECommerce Platform with Advanced Admin Tools & Loyalty System

Project Description:	The project is a multilingual eCommerce platform for a German confectionery brand specializing in candies and branded accessories. The goal was to migrate the old store to a modern CMS with improved UX, dynamic cart updates, flexible promotions, multilingual support, and extended admin capabilities. The platform enables seamless order handling, product filtering, loyalty programs, and integrations with multiple payment systems.
Domain:	E-commerce / Food Delivery
Involvement Duration:	1 years
Project Role:	Full Stack Developer
Responsibilities:	- Back-end development; - Front-end development; - Integration with Stripe, PayPal, GPay, and bank transfers; - Development of multilingual support and localized URL structures; - Implementation of real-time cart updates and product filtering; - Building a user-friendly admin panel with role-based access; Testing, debugging, and performance optimization.
Project Team Size:	2-4 team members
Tools & Technologies:	PHP, WordPress, WooCommerce, JavaScript, AJAX, Stripe, PayPal, GPay, Swiper, HTML, CSS.

Website for virtual reality equipment

Project Description:	An e-commerce website that specializes in the sale and rental of virtual reality equipment. The goals of the platform were to automate sales accounting and increase sales efficiency and profitability. A CRM system was also created for the administration and control of all processes in the company. Telegram integration was created to better communicate with customers. Customers can create a booking on the platform and the system can calculate the net profit from the person's bookings.
Domain:	E-commerce
Involvement Duration:	1.5 years
Project Role:	PHP Back-End Developer
Responsibilities:	- Back-End Development; - Automating sales accounting; - Database creation and management; - CRM development; - Integration with Telegram; - Creation of chatbot; - Fixing accounting formulas; - Testing and debugging.
Project Team Size:	2-4 team members

Tools & Technologies:	PHP, Laravel, Livewire, MySQL, Bootstrap, HTML, CSS, PHPUnit, RestAPI.
	Online auction platform
Project Description:	This is a project about an online platform where state and municipal customers announce tenders for the purchase of goods, works, and services, and business representatives compete in bidding for the opportunity to supply these to the state.
Domain:	Transparent sales
Involvement Duration:	1.5 years
Project Role:	PHP Developer
Responsibilities:	- Back-end development; - Adding new features and extending them; - Automation processes; - Work with testing on Jenkins; - Unit tests; - Bug fixing.
Project Team Size:	10-12 team members
Tools & Technologies:	YII2, LESS, Sass, MySQL, Jenkins, Bootstrap, Docker, Ubuntu.
